

# lightswitch – POST data credentials

This application indicates that the button we pressed was sent with the wrong POST data

# lightswitch – POST data credentials

Request			
	Pretty	Raw	Hex
1	POST	/lightswitch.php	HTTP/1.1
2	Host:	10.0.41.11:1337	
3	Content-Length:	32	

```
username=invalid&time=0&state=on
```

When we inspect the POST request with Burp Suite, we see that it's sent to the lightswitch.php endpoint with the above POST data

# lightswitch – POST data credentials

## Request

	Pretty	Raw	Hex
1	POST	/lightswitch.php	HTTP/1.1
2	Host:	10.0.41.11:1337	
3	Content-Length:	32	

username=invalid&time=0&state=on

So we need to determine what the valid username and time value might be
